

# WB-CEDAR

## Hard Red Winter

Central Region • Southern Region

- Excellent Yield Potential
- Excellent Straw Strength
- Very Good Yellow (Stripe) Rust Resistance
- Good Shatter Tolerance
- Early Maturity to Avoid Heat
- Good Hessian Fly Resistance

### AGRONOMIC TIPS

- Plant within the middle or later portion of the recommended planting window to lessen potential spring freeze damage.
- Use recommended seeding rates for your area.
- Avoid drought prone soils. For best performance in the western high plains plant under irrigation.
- Plants may be short under drier conditions. Planting on rolling or uneven fields may make harvest difficult.
- If conditions are dry and fall tillering is not expected, raise seeding rates to protect yield potential.
- Seed size is normally large. Monitor seed size and adjust planting rates to allow for larger seed.

The ratings are approximate and should not be considered absolute. Based on internally conducted trials relative to other WestBred® brand wheat varieties.

Individual results may vary, and performance may vary from location to location and from year to year. The result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.
